

LUMILOGY®

Product care guide

To preserve the quality and performance of your LUMILOGY luminaire over time, we recommend the following care instructions:

Diffuser

For regular maintenance, wipe the diffuser with a clean, dry cotton cloth. In case of light soiling, use water only. For heavier dirt, apply a cleaning agent suitable for glass and mirrors (e.g. Clin MultiShine). The diffuser is resistant to moisture, seawater, sulfuric acid (up to 15%), and nitric acid (up to 10%). Only use products with chemical concentrations within these limits.

Sides - decorative surface

Clean the decorative surfaces using the same method as the diffuser. Avoid abrasive cloths or harsh chemicals that could damage the finish.

Internal contamination (e.g. insects, dust)

If dust or insects enter the luminaire, please contact our service team. Do not attempt to open or disassemble the luminaire, as this will void the product warranty and exclude it from authorized service.

Pendant or offset-mounted models

Gently remove dust from the top surface of the luminaire using a soft cloth or feather duster, ensuring clear visibility of the area being cleaned. The use of vacuum cleaners or vacuum attachments is not recommended.

Storage and handling prior to installation

If the luminaire is stored before installation, place it flat with the diffuser facing upward. Avoid placing any objects on top, and prevent pressure or contact with sharp objects, which may damage the diffuser. Prolonged storage on its side may lead to deformation of the luminaire body.

Storage conditions

Store the luminaire in a clean, dry environment at a temperature above 15 °C.
