LIGHTING THE WAY

M-Line LED Lighting Systems

M-Line is a British made, modular linear LED lighting system designed for commercial spaces that evolve over time.

Available in any length, any shape, and now with an expanded palette of finishes and functional options, M-Line supports both architectural expression and practical performance.

From discreet recessed solutions to bold surface mounted features, M-Line integrates seamlessly with interior architecture while remaining flexible enough to change as a space does.

M-Line offers dependable quality, consistent lead times, and the reassurance that comes from working directly with the manufacturer.

m-LINE®

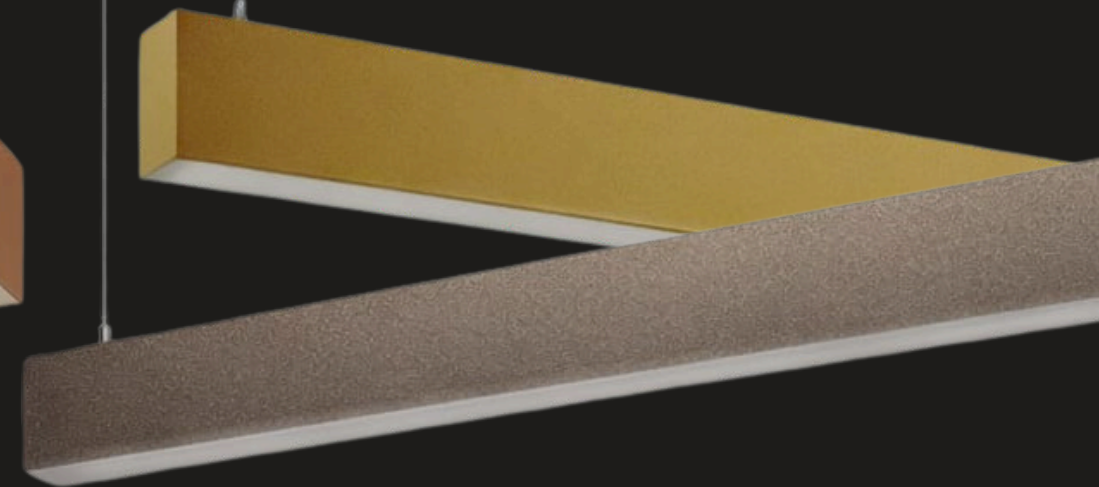

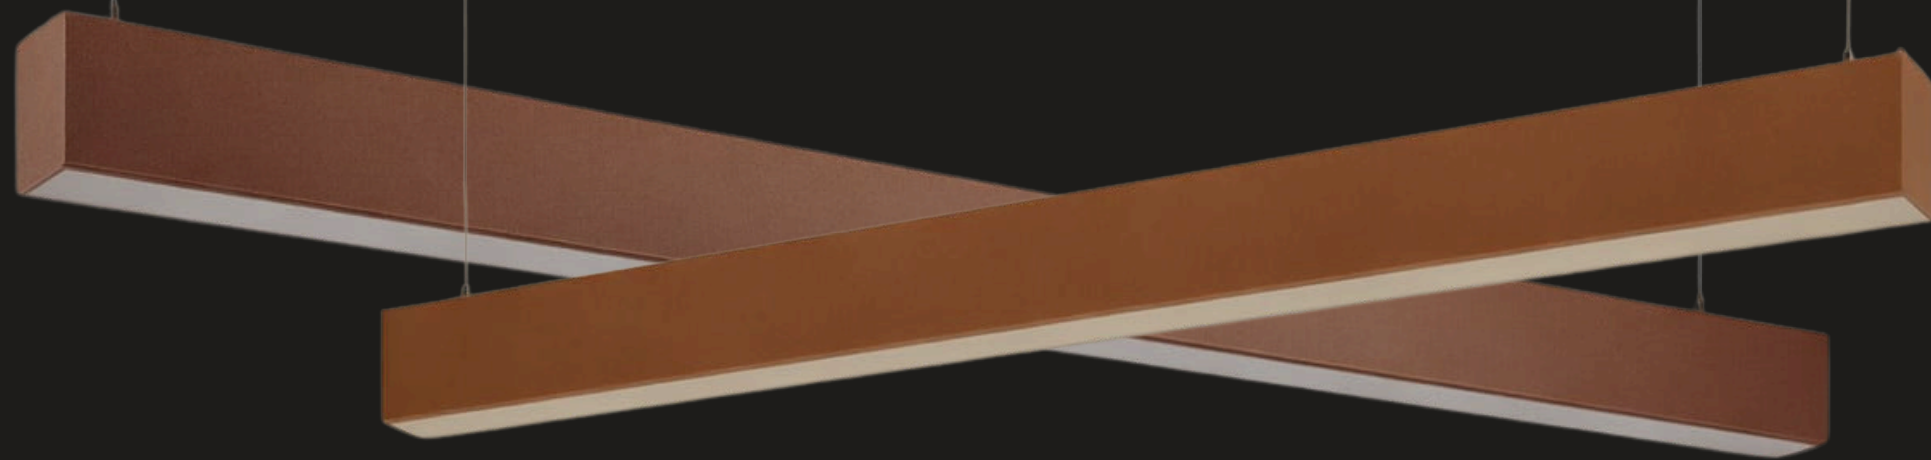

Any Length. Any Shape. Any Finish. No compromise.

M-Line is modular by design and manufactured in house in the UK. Each system is built to be adapted, reconfigured, or extended, making it the more sustainable choice for commercial projects.

M-Line can be retrofitted at later stages of a project. New outputs, controls, sensors, or lighting elements can be integrated as requirements develop, extending product life and reducing waste.

With multiple mounting applications, control options including Casambi, and a wide choice of colour finishes, M-Line allows lighting designs to be realised exactly as intended.

n-LINE

M-Line combines high performance LED technology with intelligent control. Options including Casambi Wireless give users intuitive control over dimming, colour temperature, and scene setting via smartphones, tablets, or smart devices.

Lighting can be tuned to suit different tasks, times of day, or occupancy patterns, supporting visual comfort, wellbeing, and energy efficiency across commercial environments.

The M-Line system can be tailored to both aesthetic and technical requirements. Options include blanking sections, uplight elements, and integrated presence detection sensors, all designed to sit cleanly within the system.
